TENTH DISTRICT ENERGY ACTIVITY DECLINED SHARPLY AGAIN IN Q2

Federal Reserve Bank of Kansas City Releases Second Quarter Energy Survey

KANSAS CITY, Mo. –The Federal Reserve Bank of Kansas City released the second quarter Energy Survey today. According to Chad Wilkerson, Oklahoma City Branch executive and economist at the Federal Reserve Bank of Kansas City, the survey revealed that Tenth District energy activity declined sharply again in the second quarter and was expected to remain largely unchanged moving forward.

“District energy activity dropped considerably again during the second quarter of 2020, but many firms expected some stabilization heading forward,” said Wilkerson. “A majority of firms in our survey applied for and received SBA PPP loans, but low energy prices have hurt profitability. Most regional firms do not plan to increase production levels until oil prices recover more.”

The Kansas City Fed's quarterly Tenth District Energy Survey provides information on current and expected activity among energy firms in the Tenth District. The survey monitors oil and gas-related firms located and/or headquartered in the Tenth District, with results based on total firm activity. Survey results reveal changes in several indicators of energy activity, including drilling, capital spending, and employment. Firms also indicate projections for oil and gas prices. All results are diffusion indexes – the percentage of firms indicating increases minus the percentage of firms indicating decreases. A summary of the survey is attached. Results from past surveys and release dates for future surveys can be found at <https://www.kansascityfed.org/research/indicatorsdata/energy>.

The Federal Reserve Bank of Kansas City serves the Tenth Federal Reserve District, encompassing the western third of Missouri; all of Kansas, Colorado, Nebraska, Oklahoma and Wyoming; and the northern half of New Mexico. As part of the nation's central bank, the Bank participates in setting national monetary policy, supervising and regulating numerous commercial banks and bank holding companies, and providing financial services to depository institutions. More information is available online at www.kansascityfed.org.

###

TENTH DISTRICT ENERGY SUMMARY

Second quarter energy survey results revealed Tenth District energy activity declined sharply again in Q2 and was expected to remain largely unchanged moving forward. Firms reported that oil prices needed to be on average \$51 per barrel to substantially increase drilling.

Summary of Quarterly Indicators

Tenth District energy activity declined nearly as much in the second quarter of 2020 as in the first quarter, as indicated by firms contacted between June 15th and June 30th, 2020 (Tables 1 & 2). The drilling and business activity index rose somewhat, from -81 to -61, but indicated continued substantial decreases in activity (Chart 1). The drop in the revenues and profits indexes accelerated, and the employment and wages and benefits indexes fell further. However, the access to credit index declined at a similar pace as Q1 2020, and the supplier delivery time index decreased less sharply in Q2 2020.

Year-over-year indexes also decreased significantly. The year-over-year drilling and business activity index remained highly negative at -70, but was up from a record survey low of -92. Indexes for total revenues, capital expenditures, delivery time, profits, employment, employee hours, wages and benefits, and access to credit continued to decrease.

Expectations indexes rose considerably from very negative levels in Q1 2020, and future energy activity was expected to remain largely unchanged. The future drilling and business activity index expanded from -78 to 0. The future revenues capital expenditures, delivery time, profits, employment, employee hours, wages and benefits, and access to credit indexes remained negative in Q2 2020, but decreased less sharply compared to the previous quarter. Price expectations for oil, natural gas, and natural gas liquids increased, rebounding somewhat from earlier in 2020.

Summary of Special Questions

This quarter firms were asked what oil and natural gas prices were needed to substantially increase drilling on average across the fields in which they are active (in alternate quarters they are asked what prices are needed to be profitable). The average oil price needed was \$51 per barrel, with a range of \$40 to \$75 (Chart 2). This average was below the prices reported in 2019, and the lowest recorded price to substantially increase drilling. The average natural gas price needed was \$2.88 per million Btu, with responses ranging from \$2.00 to \$5.25.

Firms were again asked what they expected oil and natural gas prices to be in six months, one year, two years, and five years. Expected oil prices were moderately higher than price expectations from Q1 2020, but lower than a year ago. The average expected WTI prices were \$41, \$47, \$53, and \$60 per barrel, respectively. Expectations for natural gas prices grew modestly from last quarter. The average expected Henry Hub natural gas prices were \$2.17, \$2.41, \$2.64, and \$3.02 per million Btu, respectively.

Firms were also asked about shut-in wells (Chart 3). Over 62% of firms shut-in wells or curtailed production in Q2 2020, primarily driven by low wellhead prices. Regarding prices moving forward, 37% of firms indicated they expect the majority of producers in the U.S. to restart horizontal drilling at prices of \$41 to \$45 per barrel. Another 37% of firms expect oil prices would need to be higher than \$45 per barrel for drilling to restart.

Additionally, firms were again asked about solvency. A majority of firms in our survey applied for and received SBA PPP loans, but low energy prices have hurt profitability. Over two-thirds of firms reported they could survive more than a year if current revenues were to continue, while around 32% would not survive a year if current revenue levels persist (Chart 4).

Selected Energy Comments

“We have low debt and believe rig counts are beginning to bottom.”

“We’re starting our 4th month without any revenue. Currently we have nothing scheduled to drill.”

“The U.S. orphaned well inventory will explode to new highs if the current price continues. In addition, I don't see a market for stripper wells in the future so many small producers will be surrendering their wells...”

“The PPP was a life saver, we're now planning to apply for the SBA Economic Disaster.”

“The market is currently oversupplied and needs to be brought back into balance. Reduced production rates are required.”

“Summer and fall waves of COVID-19 driving down demand.”

“The demand destruction from Covid-19 impact on the economy is the biggest unknown until an effective vaccine is developed. Underinvestment will drive higher prices in future years.”

“Over supply will continue to be a problem with short term moves up, but will fall back down”

“Decreased oil drilling equates to less gas production, less flaring, electricity demand going up this summer.”

“Tightening supply due to rig drop while demand gradually rebuilds.”

“Natural gas is a derivative of crude, and is not as sensitive to people sheltering in place. With less crude there will be less natural gas and without the decline in demand.”

“This has been a historically challenging down cycle. Many firms will not survive and there will be longer term damage than in comparable down cycles.”

“Continued improvement in oil prices will drive our business (i.e. whether to begin drilling or not) in the next 6 months.”
